

FEATURES & BENEFITS

Damask Fabric:

For Strength and Durability

Quilted Top Panel:

Plush 1 oz Polyester fiber is quilted into the top to provide comfort as well as a rich look. This layer of fiber is hypoallergenic.

Flanged & Hog Ringed:

A 2.5 oz non-woven flange is attached to the top panel. This flange is then attached to the spring unit with hog rings. This feature assures that the top panel will not shift after repeated use.

Densified Fiber Cushion:

A 1" layer of 1.5 oz Hypoallergenic Densified Fiber is upholstered between the quilted top panel and the insulator pad to provide a plush sleeping surface.

Densified Fiber Insulator:

This hypoallergenic pad exhibits superior strength and durability when compared to standard shoddy pad. Test indicate 45% greater resistance to burst and 93% greater resistance to tear than 1.75 oz shoddy pad. This insulator pad is used on the bottom of the spring unit as well as the top.

253 Coil Spring Unit:

A 4 turn bonnell spring unit. The spring unit is made of 13 1/2 gauge wire coils which are tied together with 17 1/2 ga lacing helicals. This unit will provide excellent support for the body as well as showing superior durability. The coil count is 299 for Queens, 253 for fulls, and 184 for twins.

1 1/4" Binding:

This wide binding is used on both the top and bottom seams to reinforce the strength of the seams.

Special Notes:

This Mattress meets California TB603 Flammability Standards as well as Federal 1633CFR Standards.

Compatibility:

This mattress is compatible with the Marriott Specified Contract Sofa Sleeper Mechanism.
